AB The compns. comprise (A) aromatic polycarbonates 100, (B) (onium ion-intercalated) layered silicates with cation exchange capacity (EC) 50-200 meq/100 g 0.1-50, (C) hydrophilic segment-containing compds. having affinity to A 0.1-50, (D) liquid crystalline polyesters 0.1-100, and optionally (E) higher fatty acid polyol esters 0.005-1 part. Moldings with thickness 0.05-2 mm prepared by injection molding of the compns. are useful for elec. apparatus, automobile parts, etc. Thus, 100 parts Panlite L 1250WP (aromatic polycarbonate) was mixed with trioctylmethylammonium chloride-intercalated Somasif ME 100 (synthetic fluoromica; EC 110 meq/100 g) 9.8, DYLARK 332-80 (styrene-maleic anhydride copolymer) 14, and Vectra A 950 (liquid-crystalline polyester) 14 parts and injection molded to

give

a specimen showing flexural modulus 4790 MPa, spiral flow 24 cm, good surface smoothness, and no warpage.

AB A stabilized stripping composition is provided for removing fully cured polymeric organic substances from an inorg. substrate, including polyimides and liq. crystal polymers (LCP). The stripping composition comprises about 3 to about 15 percent of benzyltrimethylammonium hydroxide
